QUICK START GUIDE

Marketing Content Calendar

Your drag-and-drop content planner inside Google Sheets. Thank you for your purchase!

Make My Copy →

Opens Google Sheets and asks "Make a copy?" - click **Make a copy**. Works with any free Google account.

1 Make your copy

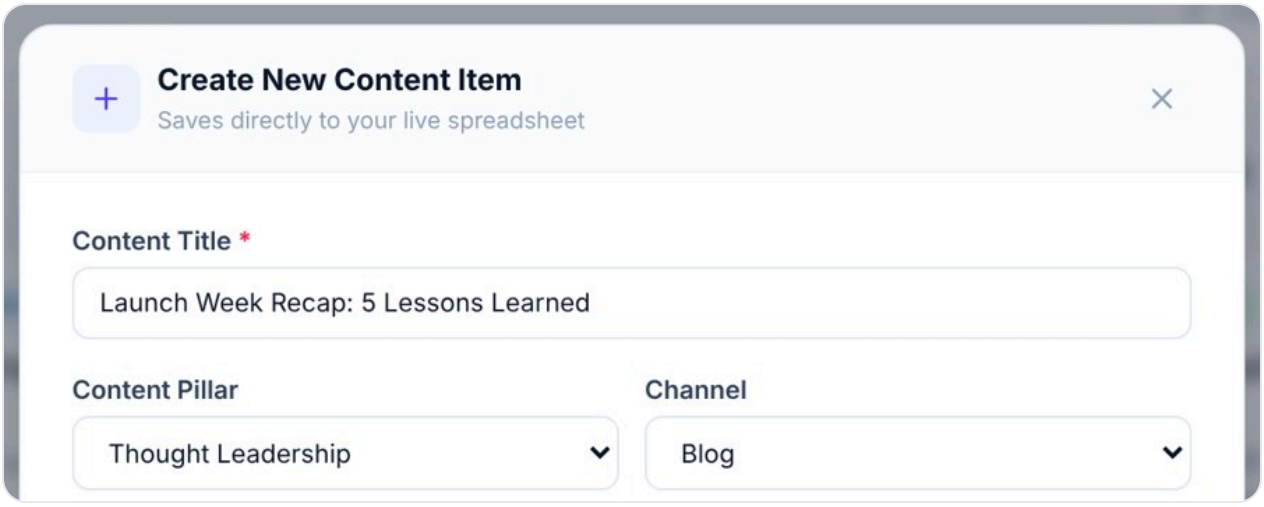

Click the button above while signed in to Google. Your own copy is saved to your Google Drive - rename it anything you like.

2 Open the board

At the bottom of the spreadsheet, click the **Marketing Content Calendar Kanban Board** tab. That's your app. The **Content Calendar** tab next to it is where every item is stored.

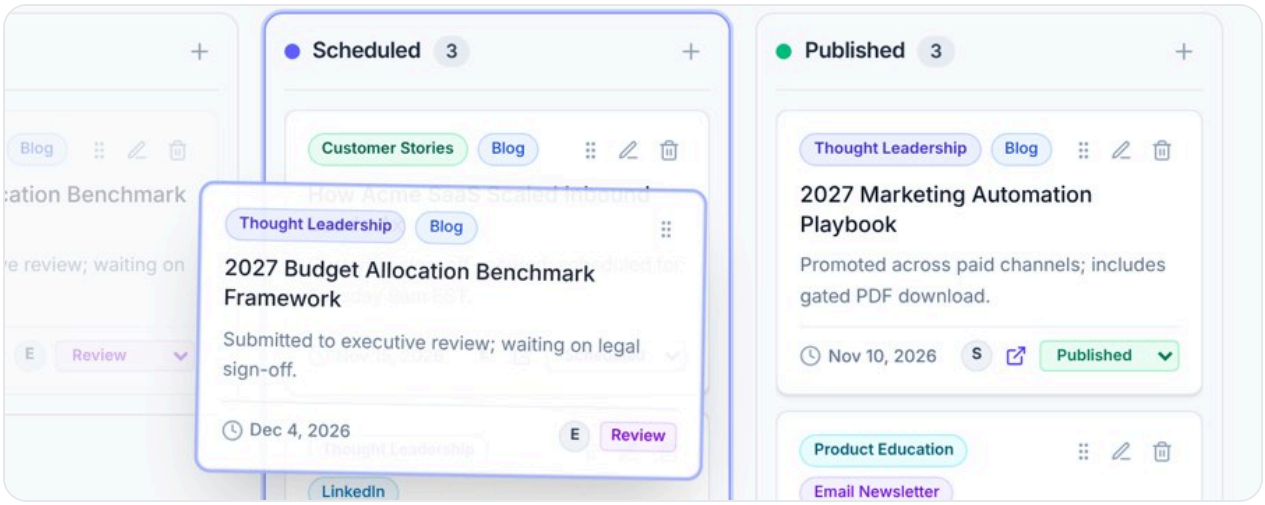

3 Add content

Click **+ New Content** (or the + on any column or calendar day). Fill in the title, pillar, channel, date, owner and notes, then **Add Item**. It saves straight into your sheet.

4 Move it through your pipeline

Drag any card to a new column - **Draft → In Progress → Review → Scheduled → Published** - or change the status dropdown on the card. Use the pencil to edit and the trash can to delete.

5 Switch views

- **Calendar** - every item on its target date, color-coded by status. Use the arrows to change months.
- **Table** - search, sort by date or title, and update status in one place.
- **Insights** - channel mix, content pillars, pipeline funnel and each person's workload.

Use the search box and filters (pillar, channel, status, owner) on any view.

6 Make it yours

The sample content shows how everything works. When you're ready, open the **Content Calendar** tab and delete the sample rows below the header row - keep the title, summary and header rows. Your board updates instantly.

Tip: The board works best in a web browser on a computer. On a phone, open your sheet in your mobile browser rather than the Sheets app.

FAQ

Do I need a paid Google plan or Gemini? No - it works with a free Google account.

Can I share it with my team? Yes - share your copy like any Google Sheet. Anyone with edit access can use the board.

Can I change the board's design? The board's layout is fixed, but all of your content, dates and statuses are fully editable.
