QUICK START GUIDE

Purchase Order Generator & Tracker

Create, track and send purchase orders from one simple app inside Google Sheets. Thank you for your purchase!

Make My Copy →

Opens Google Sheets and asks "Make a copy?" - click **Make a copy**. Works with any free Google account.

Button not working? Copy this link into your browser:
https://docs.google.com/spreadsheets/d/17pk2isedE8gVueQf0LDmiXpIt8nvCR77zFy5L2n01pQ/copy

1 Make your copy

Click the button above while signed in to Google. Your own copy is saved to your Google Drive - rename it anything you like. Then click the **Purchase Order Management Dashboard** tab at the bottom: that's your app.

2 Add your company details

Open the **Company** tab and replace the sample details with your company name, address, phone, email and website. Set your **Tax Rate** as a decimal (8.25% = 0.0825, or 0 if you don't charge tax) and your **PO Prefix** (for example PO- or ACME-). These appear on every purchase order.

3 Add your vendors

In the app, open **Vendors** and click **+ Add Vendor**. Enter the name, contact, email, phone, address and payment terms. Each vendor card shows its total spend and order history.

4 Create a purchase order

Click **+ New PO**. Choose a vendor (their contact and payment terms appear on the right), set the order and expected delivery dates, then add line items with **+ Add Line**: item/SKU, description, quantity and unit price. Subtotal, tax, shipping and total calculate live, and the PO number is assigned automatically. Click **Create PO**.

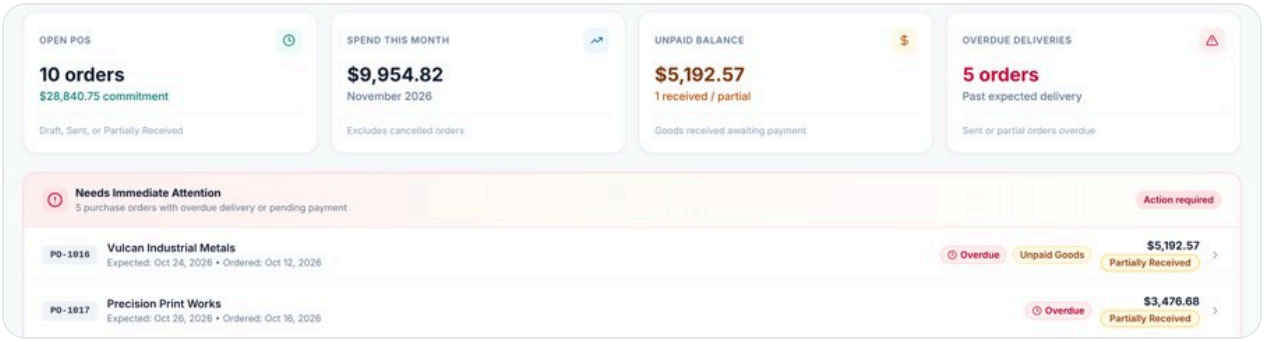

5 Track every order

Open any PO from **Orders** and use the quick buttons: **Mark as Sent** when you send it, **Mark as Received** when it arrives (received quantities fill in automatically), and **Mark as Paid** when you pay the invoice. For a partial delivery, set the status to Partially Received and type the quantities you received.

6 Watch your dashboard

The **Dashboard** shows open orders, spend this month, unpaid balance and overdue deliveries, plus a **Needs Immediate Attention** list, monthly spend, POs by status and your top vendors. Click anything to jump to it.

7 Send a PO to your vendor

Open the PO and click **Print / Save as PDF** (or open **Print View**), then press **Ctrl+P** (Windows) or **Cmd+P** (Mac). In the print window: set Destination to **Save as PDF**, open **More settings**, **uncheck Headers and footers** (removes the web address and date), **check Background graphics** (keeps the colors), and set **Scale** to about 75-80 so the whole PO fits on the page. Save, then attach the PDF to an email to your vendor.

8 Make it yours

The sample company and orders show how everything works. When you're ready, delete the sample orders from the app (open a PO → Delete) or clear the sample rows in the **POs**, **PO Lines** and **Vendors** tabs - keep row 1 (the headers). Your dashboard updates instantly.

Tip: The app works best in Chrome on a computer. On a phone, open your sheet in your mobile browser rather than the Sheets app. Chrome remembers your print settings, so you only set them once.

FAQ

Do I need a paid Google plan? No - it works with a free Google account.

Can my team use it? Yes - share your copy like any Google Sheet. Anyone with edit access can create and update POs.

Can I change the PO numbers? Yes - change the PO Prefix on the Company tab. New POs continue from your highest number.

Can I change the app's design? The layout is fixed, but your company details, vendors, orders and line items are fully editable.
